EDUCATION

Indiana University Bloomington

Master of Science in Computer Science — GPA: 3.82 / 4.0

Bloomington, IN, USA

Aug. 2024 – May 2026

Kalinga Institute of Industrial Technology (KIIT University)

Bachelor of Technology in Computer Science & Engineering — GPA: 8.85 / 10.0

Bhubaneswar, OD, India

Aug. 2020 – May 2024

EXPERIENCE

Global Health Impact Project

Software Engineer

Feb. 2026 – Present

Indiana University – Bloomington, IN

- Contributed to a data-driven platform analyzing the impact of pharmaceutical interventions across global populations
- Supported development of forecasting tools to evaluate how treatment coverage and efficacy affect health outcomes
- Translated research requirements into scalable features, improving usability and accessibility of insights
- Collaborated with cross-functional teams to support data-driven decision making in healthcare contexts

University Information Technology Services (UITS)

Consultant – IT Services

Aug. 2025 – Present

Indiana University – Bloomington, IN

- Diagnosed and resolved 100+ system issues weekly, improving operational efficiency and service delivery
- Applied structured problem-solving to identify root causes and reduce recurring technical issues
- Supported identity and access systems, ensuring secure and reliable access to university services
- Documented workflows and insights to improve service processes and operational effectiveness

PROJECTS

Business Analytics Dashboard | React, Node.js, PostgreSQL, Tableau

- Built a decision-support system to track KPIs and analyze business performance trends across datasets
- Designed data models and dashboards to generate insights and support data-driven decision making
- Implemented scenario analysis to evaluate the impact of changes in key business variables

User Behavior Analytics Pipeline | Python, PostgreSQL, Airflow, Tableau

- Built a data pipeline to ingest, process, and analyze user activity data from simulated application logs
- Designed ETL workflows to clean, transform, and store data for downstream analytics
- Developed dashboards to track engagement metrics, retention trends, and user behavior patterns

Retail Analytics Platform | Next.js, PostgreSQL, Drizzle ORM, Chart.js

- Built dashboards to analyze business performance metrics and identify trends across datasets
- Designed data pipelines and SQL queries to enable structured analysis of retail data
- Generated insights to support decision making and improve understanding of business performance

Market Entry Strategy Simulator | Python, SQL, Tableau

- Developed a decision model to evaluate market expansion strategies using simulated business data
- Analyzed revenue potential, cost structures, and competitive factors to identify optimal entry strategies
- Built dashboards to visualize trade-offs and support scenario-based strategic decision making

Brain Tumor Classification | Python, TensorFlow, CNNs

- Analyzed 7,000+ MRI scans to develop models for accurate tumor classification and diagnosis support
- Evaluated multiple modeling approaches to identify the most effective solution balancing accuracy and efficiency
- Co-authored IEEE publication, contributing to research and data-driven insights in medical decision-making

TECHNICAL SKILLS

Analytical: Problem Solving, Structured Thinking, Data Analysis, Hypothesis Testing

Technical: Python, SQL, JavaScript

Data & Tools: Excel, PostgreSQL, Tableau

Business Analysis: KPI Analysis, Dashboarding, A/B Testing, Market Analysis, User Behavior Analysis

Product & Strategy: Dashboarding, Strategic Decision Making, Process Optimization

Communication: Stakeholder Communication, Data Storytelling
